Follow these steps to complete the CT Request Form

All forms should be completed and returned to UTCVM at least 24 hours prior to appointment.

SECTION I - Referring Veterinarian Information
Always include YOUR NAME, the PRACTICE NAME, and PHONE NUMBER. In the event we have questions about the condition of the patient or need to discuss the scan request, it is very important that we are able to contact you, or an associate familiar with the case, during the procedure. A primary contact name MUST be included.

SECTION II – CT Scan Requested
Please choose a CT scan from the list attached, or contact the UTCVM Veterinary Imaging Services directly for assistance in determining which scan you need. Please include your presumptive diagnosis/rule-outs for the current problem. This will assist the imaging technologist in providing a comprehensive scan and will help the radiologist interpret the images.

SECTION III - CT Report
A written report will be sent via email or fax the next working day following the scan. Please indicate your preference for how you would like to receive the report and provide the appropriate email address or fax number. The images will be sent with the owner on a CD.

SECTION IV - Patient Information
This information MUST be sent to UTCVM prior to appointment. Please provide the name and contact information for the pet owner. This will enable us to create a patient file prior to the time of the appointment. Although all patients receive a physical examination when they arrive at UTCVM, it is important for us to know what to expect before they arrive. Provide as much information as you can about the patient in this section, including the findings of additional testing, i.e. ECG, radiographs, echocardiography, contrast studies, bronchoscopy, ultrasound, etc. Please do not send radiographs with the client. Please note that blood-work should be no more than 2 weeks old and/or at the discretion of the anesthesia personnel. If the patient is an ASA 4 or 5, the animal will require a referral to UTCVM Veterinary Medical Center, for specialized anesthesia care, recovery and access to ICU. Please note that we are unable to accept referrals for animals not currently vaccinated and aggressive animals.

ANESTHETIC RISK (ASA STATUS):
Performing a CT scan in animals requires general anesthesia or heavy sedation. Although rare, there are inherent risks and potential complications associated with anesthesia/sedation and the CT procedure. These include, but are not limited to, abnormal reaction to anesthetic or contrast agents, organ failure (heart, liver, kidneys), airway obstruction, regurgitation, aspiration of vomitus, gastric dilatation-volvulus (GDV), nerve damage, hypothermia, equipment malfunction, skin burns, and death. Please assign an American Society of Anesthesiologists (ASA) Status to the patient using the instructions on the following page. This classification will determine what pre-anesthetic laboratory tests will be required prior to the scan appointment and assist us in formulating an appropriate anesthesia protocol for each individual patient. If the patient is an ASA 4 or 5, a referral to UTCVM Veterinary Medical Center is required. Please note that blood-work should be no more than 2 weeks old and/or at the discretion of the anesthesia personnel.
### ASA Description Examples

<table>
<thead>
<tr>
<th>ASA</th>
<th>Description</th>
<th>Examples</th>
</tr>
</thead>
</table>
| 1   | Excellent   | • Apparently healthy  
  • No obvious signs of disease  
  • Hip dysplasia  
  • OCD lesions  |
| 2   | Good        | • Mild systemic compensated disease  
  • Neonatal or geriatric animals (<8 weeks or > 10 years)  
  • Vestibular disease  
  • Epistaxis  
  • Controlled seizures without other neurologic signs  
  • Uncomplicated intervertebral disc disease  |
| 3   | Fair        | • Moderate systemic disease  
  • Low to moderate fever  
  • Mild to moderate anemia  
  • Chronic heart disease / newly found  
  • Diaphragmatic hernia  
  • Moderate dehydration and hypovolemia  
  • Controlled seizures with other neurological signs  
  • Increased respiratory disease with/without aspiration pneumonia risk  
  • Anorexia  
  • Cachexia  
  • Pneumothorax  |
| 4   | Poor*       | • Severe systemic disease that is a constant threat to life  
  • Shock  
  • Uremia  
  • Severe anemia  
  • Uncontrolled diabetes mellitus  
  • DIC  
  • High fever  
  • Sepsis  
  • Emaciation  
  • Severe pulmonary disease  
  • Severe dehydration and hypovolemia  
  • Decompensated cardiac or renal disease  |
| 5   | Guarded*    | • Moribund patient  
  • Not expected to survive 24 hours  
  • Multisystem failure  
  • Severe head injury  
  • Profound shock  
  • Major trauma  |

*ASA 4 or 5 will require a referral to UTCVM Veterinary Medical Center

### Minimum Required Diagnostic Screening According to ASA and Age

UTCVM recommends a cardiac workup with ECHO for any unevaluated heart murmurs and/or cardiac arrhythmias.

PCV = packed cell volume; TP = total protein; BUN = blood urea nitrogen; CBC = complete blood cell count (to include a white blood cell count and differential; a red blood cell count and indices; a platelet count; and hematocrit, hemoglobin and plasma protein measurements); UA = urinalysis (to include color, transparency, specific gravity, protein, glucose, ketones, bilirubin, occult blood, urobilinogen, pH, nitrate, and sediment analysis); anesthesia profile (to include glucose, BUN, creatinine, AST, ALT and ALP); complete profile (to include glucose, BUN, creatinine, AST, ALT, ALP, albumin, potassium, sodium, chloride, calcium, phosphorus, total CO₂, anion gap, total bilirubin and CPK)

**Adapted from the American Society of Anesthesiologists Physical Status Classification**
GENERAL INFORMATION: General anesthesia is required for all CT examinations. All patients must arrive the day before the scheduled procedure. The CT scan request sheets and the laboratory results should be received at least 24 hours prior to the appointment to facilitate safe anesthesia planning.

SECTION I – Referring Veterinarian Information

PLEASE NOTE: It is very important that you or one of your associates is available by phone the day of the scan.

Name _____________________________________________________________ Specialty __________________________

Practice name ___________________________________________________________________________________________________

Street address ___________________________________________________________________________________________________

City __________________ State __________ Zip code __________

Phone ( _____ ) ___________________ Fax ( _____ ) ___________ Email __________________________

SECTION II – CT Scan Requested

Please refer to the list of scan regions, or call us for assistance.

Scan requested ______________________________________

Presumptive diagnosis / rule-outs ____________________________________________

SECTION III – CT Report

A written report will be sent via email or fax the next working day following the scan.

Report preference:  □ Email □ Fax ( ______ ) _________________________________________________________________________

SECTION IV – Patient Information

Refer to the instruction sheet to determine pre-anesthesia required laboratory tests based on ASA status, or call us for assistance. Please note that laboratory values should generally be no more than 2 weeks old.

ASA Status (check one):  □ 1 □ 2 □ 3 □ 4 □ 5 ASA 4 or 5 will require referral to UTCVM Veterinary Medical Center.

Client name* __________________________________ Client email __________________________

Address* __________________________________ City __________ State __________ Zip code __________

Phone 1* (_____ ) ___________________ Phone 2 (_____ ) __________________

Pet Name __________________________ Species __________ Breed __________ Color __________

Weight (kg) ___________ Age ___________ Sex ___________ Microchipped? □ Yes □ No

Relevant clinical problems __________________________________________

Current medications __________________________________________

Previous anesthesia or surgery? □ Yes □ No Comments __________________________________________

Is there any metal in this animal? □ Yes □ No Comments __________________________________________

Is the patient ambulatory? □ Yes □ No Comments __________________________________________

Additional Comments __________________________________________

I agree to allow the UTCVM Veterinary Medical Center to place the report in its patient records for future use.

**CT Scan Regions**

When filling in the request form, please choose a CT scan from the list attached, or contact the UTCVM Veterinary Imaging Services directly for assistance in determining which scan you need. Please note that consultation is mandatory for all brain and spinal scans. Please include your presumptive diagnosis/rule-outs for the current problem. This will assist the imaging technologist in providing a comprehensive scan and will help the radiologist in interpreting the images.

Presumptive diagnosis/differential
